➤ Database -

Trainings –

- 6 weeks training on “**Android App Development**” at Internshala 8Jun-19July’20.
- 4 weeks training on “**PYTHON**” at ICT Academy, IIT Kanpur
- Training On ML(Machine Learning) At Udemy.

Projects-

➤ **Traffic Analysis Using Object Detection-**

The main purpose of our project is to detect the vehicles like pedestrians, bike, car and bus. And, also to count the no of vehicles. Its main focus is to give information to the database about the no of vehicles from the photos and videos.

So that, in future with the help of it more applications should be developed to minimize the problem traffic. Now, in present every Person use Google map to see the traffic on the road which is based upon mobile locations in future, our application work on traffic cameras and hence, it may become an opportunity for the people who want to discard traffic.

➤ **Prospect Encore Using(Python & Mysql) –**

It Is a Based on Car Showroom. Project main Idea is Every Car Showroom regular many coustmor visit and Seen many Car.and according his comport choose car.

Afterthat Evening All Coming Coustmor details Collect in one place my project coustmor divide 3 Catagories Hot ,Clod & Warn. if Any Coustmor need Argent car then Automatcally give Hot catagories. if Any Coustmor need car then Automatcally give Warm catagories. if Any Coustmor need car but not present time then Automatcally give cold catagories.

➤ **BookHub & FoodHub in(XML & Kotlin) –**

It is a App based on Android App Devlopement using Xml & Kotlin.

Bookhub App works on Suggest book.Every person his\her age.and what book is good ,and learn lots of things.and Foodhub App is Similar to Zamoto & Swiggy.

➤ **Library Management System in Java-**

It is an online library system in which students can themselves fill their entries. Entries would be at last verified by library Administrator, leading to efficient library Management and time saving. It reduces administrator workload to save entries of student one by one and saves time of students
