Automation Tester

PROJECTS

NFMT (Network Function Management Transport)
Client : Nokia
Technology : Java,Python, Angular 2/4, Javascript, HTML5, CSS3
Role : Automation tester
Description :
Developed automation scripts for performance enhancements in the project
Develop enhance and testing a website with automation for Nokia to manage the NEs.
Automation testing for the new features developed with xlm,xls, and eclipse with git repository
Testing with selenium
Across the globe using FCAPS principle introduced by ITU-T.
 .
Responsibilities :
Performed Form Validation with javascript
Analysing backend call for service request with Java.
I have also done automation testing for the new features with xml and xls. This was done by using configurations running on eclipse. This also involved pushing the code changes to git repositories. This was done mainly to improve testing of newly developed features and to debug with less time.
Developed script that creates a readme.txt file after successful jenkin run.
