Projects

Desing a web Browser
In this project i made a web browser using Java in Android studio and also this a native app because this is the smartphone application and also native apps are very fast and responsive. The web browser will helps people to search any sites or content or anything they want. The more interesting thing in that browser is that we can involve all the browsers like ucbrowser, safari, opera mini, chrome in one browser which is easy to operate.

Restaurant Management System

Operating this python program will help you in reducing your time, effort, and complexity. Nowadays restaurants are filled with people so it's very difficult to manage all the work manually. This is why people need to use this management system so that their workflow and efficiency is increased.

This application system is developed by Junaid Shapoo and Khushboo pandey using Python GUI so that people can maintain the orders and calculate the prices of orders at the restaurant. In Restaurant Management System, a user can calculate the price, subtotal price, tax cost and total amount of the order easily by managing the quantities and prices of the items.

Period :- 1 month

Team Size :- 2

Role :- Front end Developer
