PROJECT

Title: RTC Based Power Controller

Role: Team Leader

Members: 4

Skills: Micro Controller Programming

Description:

The main aim and mechanism of this project is to automatically turn on or off the light in a room by detecting the human movement. We implement this project using 8051 Microcontroller and two Infrared (IR) sensors. Since the job of the circuit is to turn on the light when someone enters the room and turn off the light when the last person leaves the room, the project has to internally count the number of visitors entering and leaving the room.
