PROJECTS

Title: Insight

Organization: Ilink Solutions

Client: BGCA, US

Description: This is an internet application which involves capturing various activities of the organisations under BGCA which provides training to school students on all aspects after their school hours. It captures data related to finance, legal, staff management, compliance, safety and quality of all the sites under a specific organisation across regions.

Team size: 4

Technologies: Azure VM, app service, asp.net core mvc, api, sql server, jquery, SSRS

Title: Autoforms

Organization: Ilink Solutions

Client: AT&T, US

Description: Auto forms is one of the tools in AT&T to eliminate the need for manual data copying from various systems for the New Site Build process. It uses RFDS (Radio Frequency Data Sheet) to collect data from various interfaces and to launch the new Antennas by making the RF upgradation to the Technology such as UMTS, LTE and 5G to the existing Cell Sites. And focus on Cloud based Baseband unit for better signal receptions and Network coverage with less space and reduces the expenses.

Team size: 7

Technologies: asp.net mvc, javascript, sql server, angular, web services

Title: Inspection Control Module

Organization: Omnex Technologies Ltd

Client: N/A

Description: This is an internet application which involves various functionalities related to different inspection types like receiving, final and inprocess inspection. Each inspection type has different functional activities. The unique feature is the inspection sheet whose design can be tailored according to the business requirements of the customers.

Team size: 3

Technologies: asp.net mvc, jquery, web services, sql server

Title: ERG portal

Organization: CTS

Client: US

Description: ERG portal is an intranet application for the client which involves various functionalities like workday feed, subscription and unsubscription of users to the different DYI health programs and ERG report.

Team size: 2

Technology: C#, asp.net, sql server, MVC, Jquery

Title: Concur**Organization:** Dell International services**Client:** Dell**Description:** This is a web application where encrypted employee data comes from workday and SAE data from concur respectively. Data is decrypted and stored in CIL DB. Full employee information is encrypted and sent to Dell concur instance and changed employee information is encrypted and sent to EMC concur instance via managed file transfer. Similarly SAE encrypted file is received from Concur, decrypted and stored in CIL DB. Information is segregated into various types like credit card data, VAT, Journal, etc. Expense reports are generated for America, APAC and EMEA using this data and sent to Novora for payment. Once Novora confirms payment concur data is updated.**Team size:** 3**Title: Vehicle Incentive Management System (VIMS)****Organization:** Tech Mahindra**Client:** Nissan, North America**Description:** This application is a Web application used by customers in NNA. This is used by auditors to scrutinize the payments made to dealers based on their sales performance in a particular audit. The auditors adjust the payments if they find any discrepancy in sales. If there is no discrepancy the audit goes for approval.**Team size:** 3**Title: Spin Enterprise Legal Suite (SELS)****Organization:** Tech Mahindra**Client:** Nissan, North America**Description:** This application is a web based application used by customers in NNA. This is a finance application where invoice details will be sent to SAP. SAP will process the invoice and send back to SPIN via batch jobs. Invoices are mapped against a unique entity called matters. A matter can contain many invoices. Once all the invoices are processed in a matter that matter will be closed. All the closed matters will be purged periodically or upon customer request.**Team size:** 2**Title: OE FORUM****Organization:** Tech Mahindra**Client:** Chevron, US**Description:** OE Forum is a web based application. This forum will be held in US where all the participants who register for the forum give paper presentations on various health related tracks. The presentation can be either a poster session or a direct speech. This involves the following modules such Abstract submission/Vetting, Nomination, Registration & Admin**Team size:** N/A**Title: Project Tracker System****Organization:** Tech Mahindra**Client:** Chevron, US**Description:** The Project Tracking System is an environment in which to capture capital and non-capital project details as a project moves through the CPDEP process of development to execution (CPDEP Phase 1-5). The database contains the Phase Gate Project Execution Tool (Deliverables), MCBU Front-End Loading tool and DQ Spider**Team size:** N/A.
