PROJECT:

An Automated and Robust Image Watermarking System:

- In this project, we propose using an invisible watermark in images which will be relied on several algorithms like Image Segmentation, Steganography, Hashing and will be enhanced by Machine Learning Algorithm which will use our trained Neural Network for the system.
- My Proposed Project is an invisible and indelible watermark to your images, all without any degrading effect on image quality. This allows agencies and photographers to track their work and prove ownership when images are found to be illegally used on the web or in print.
- Tools used are Python Programming, Open CV (Open-Source Computer Vision Library), Machine Learning, Hashing Algorithm.

ACHIEVEMENTS

- Participated in Workshop on “Soft skills, Personality development & Career Opportunities” organized by Nizam college in 2020.
- Participated in the National Conference on “Women in Science Education and Research (WISER): Challenges and Opportunities” held on 2016.
- Participated in several workshops on skill development.
- Stood first in teaching at school level.

- I hereby declare that the above furnished information is true and correct to the best of my knowledge.
