1. Developed a **BLUETOOTH CONTROLLED ROBOT** as a group that can be controlled by an app. It is aimed at performing unmanned military operations and rescue missions and also can be used as a fight robot for entertainment purposes.
2. Designed a Smart Tester as a group which we called it **JUNTION 2.0**. The tester is supposed to test not only the power flowing in the power socket, but also detect the power flowing in the circuit body. It helps to detect location of power leakage and point out directly at the circuit flaw points
