B.E. (Computer science and engineering)

Educational Summary

I am a Bachelor of Engineering in Computer Science with expertise and development experience in Android programming, Microsoft Access, Microsoft Visual Studio 2010 and MySQL2008. Interested in pursuing careers in database optimization, analysis and building information flow architecture using various programming platforms such as JAVA, Android, MS Office suite and MySQL2008.

Project

MediBuddy – An Android based application (Final Year Project)

Language – ANDROID, Microsoft Visual Studio 2010 (.net)

- The main objective of this project is to develop an android based application to provide an alternative to procure cost effective medicines which are easily available at the nearest location.
- Synchronizing with Google maps and location, the business model requires the involvement of individual medical store owners to provide information about specific products, respective cost and availability.
- This application was developed to facilitate cost effective medicine procurement for common people.

Responsibilities Handled

- User interface design and backend development.
- Testing the program and find problems/bugs.
- Innovate data flow architecture and data mapping using search agents.
