- Proficient in Windows 10, Linux.

## PROJECTS

1: **Project Name: Geo Attendance Application (JAVA)**

**Project summary**: The Geo Attendance application enables organization to capture the attendance of their employees from any location, at any given time. Geo-attendance and Geo-fencing features allows managers to track employee location, distance and route traveled. The manager is always aware of an employee's movements, data and mobile status and automatically gets a message when the data or device is switched off. Employees can mark their attendance via mobile once they enter the building or its defined radius. Customized notifications when employee enters, exits or is absent from work site. Automatically notifies for low phone battery and device shutdown. This Geo attendance application works on Geo location/ Geo fencing technique by Google location service API to provide an accurate Geo fence radius. Gets Integrated with any existing HR system, employee system for file uploads (joining, termination etc.). Have a user entry screen for employees as well if data needs to be maintained.

**Role: Back-end Developer**

**Responsibilities:**

- Worked on different phases of application development including requirement analysis, designing, development, management and execution.
- Worked closely with Project Manager, Programmers and Testers to ensure the application meets business requirements.
- Worked on Restful API creation for data manipulation as per the business requirements. Actively participated in consolidated report creation and generation for end user.
- Coordinated with Data Base team to ensure that the migration of project information from an existing system to new database is done effectively.
- Prepared Excel spreadsheets database and performed queries MySQL workbench to obtain specific employee-related data.

**2: Project Name: Retailer Portal Distributor**

**Project Summary:** It is a online web application provide solution retailer to Distributor. Retailer can see product, distributor update, insert and Price edit as well. Retailer place the order for product to distributor, From distributor web application PO number is generated against that PO ,a Invoice no. is generated that invoice will appear in retailer web application after delivery of product for that invoice payment section will open (cash or digital mode also available) ,For retailer , in this application retailer can see sales report, payment report and stock.

**Role: Back-end Developer**

**Responsibilities:**

- I have worked on Master data for retailer.
- Settings of distributor product assignment for retailer.
- Integrated distributor with Retailer portal.
- Worked on stock adjustment (Update Purchase Price, Quantity etc.).
- Send PDF by email using java mail.
- Worked on Customize report day wise, Month wise, year wise both.
