Project Details:-

- **Name of Project**   **: -**   Wireless Health Monitoring System.
- **Language**   **: -**   Embedded Programming in C.
- **Period**   **: -**   6 Month.
- **Description :-**

    This Project Design for Hospitals to Monitoring Body Temperature and Heart Beat Using Sensors and Controlled by Microcontroller and transit using RF Module.

    So we are here, just connecting the temperature sensor and heartbeat sensor so that simultaneously we can monitor the patient's condition and hence ruling out the use of the thermometer and other devices to check the condition of the patient.

    The heart rate and body temperature is then transmitted wirelessly to the doctor which in not in the vicinity of the patient through RF Module. The sensor measures the information and transmit it through RF Transmitter and other end RF Receive the information and display on LCD

Strength: -

- Smart Working.
- Fast Learner.
- Good Team Leader.
- Time Management.
- Good Technical Knowledge

Personal Details

DOB	: -	14th November, 1991.
