Language	Core Java, Python
Version Control	Git
Methodologies	Agile, Waterfall
Databases	MySQL
Framework & Tools	BDD, Selenium, Load Runner, Performance Center, Storm Runner, JMeter
Defect management & other	Service-now, Jira, Confluence, Bitbucket

PROJECT SUMMARY

Domain: Finance (Ameriprise Financials) Jul 2018 – Current

Tools & Technologies: Linux, Python, Selenium, Java, Cucumber, Load Runner, Performance Center (ALM), Git, StormRunner Load (LoadRunner Cloud), JMeter, SiteScope, Service-now, JIRA, Confluence, Bitbucket

Project Description: As being a diversified financial services company, we deal with their own financial web applications at enterprise level, which includes designing of the automation frameworks, Regression test suites. Also, as a Performance Engineer, supports the overall performance of the application from the requirement analysis phase till the production deployment.

Responsibilities:

- Building Robust automation framework using Page Object Model for Enterprise solution.
- Creation and maintenance of current and Regression test suites using Selenium with BDD framework.
- Load Runner and JMeter Script creation/modification of Web applications, web-services, TruClient, Oracle stored procedure etc.
- Dockerization of Load Generator servers to execute Performance test of intranet applications.

Domain: Finance (Infosys limited – Capital Group Companies) Jan 2018 – Jul 2018

Tools & Technologies: Core-Java Selenium, Cucumber, Load Runner, Performance Center (ALM)

Project Description: Test-Engineered the Functional and Non-Functional requirements of different web-applications. Results of which were shared with respected client to discuss the acceptable performance results.

Responsibilities:

- Selenium and Load Runner script creation/modification using different protocols such as Web Http/Html, RDP.
- Trend analysis of the response time of the transactions with the baseline numbers.
- Designed the Intake document for requirement gathering at high level.

Domain: Healthcare (Infosys Limited – Anthem Inc.)

Jun 2015 – Jan 2018

Tools & Technologies: Core-Java, Selenium, Cucumber, JIRA, Confluence, Bitbucket, Git

Project Description: Anthem is trusted health insurance provider in U.S and provides the facility to enroll the members in specific insurance in group and individual policies. This application had large numbers of functional flows to be tested in multiple sprints.

Responsibilities:

- Test case planning and designing according the BDD framework and execution accordingly.
- Part of the framework designing team and implemented the missing flow in the framework required in the different team.
- Creation and Execution of Regression test bed with critical end-to-end scenarios and performed the UAT as well.
- Implemented the idea of the initial required knowledge video sessions for the new joiners to improve the quality time/work of the employees.

TRAINING

Infosys Generic and Stream Training
Infosys Limited, Mysore

Jan 2015 – May 2015

EDUCATION

B.E., Electronics and Communication
Chitkara University, Himachal Pradesh
2014
