### **ACADEMIC PROJECT:**

#### **MAIN PROJECT**

##### **Project Title: A SYNCHRONOUS SINGLE SWITCH INVERTER**

**Description:** Reducing the switch count and increasing the levels of voltage will increase the power inverters' quality and efficiency. Vector controls of inverters have been used to increase limited levels of output voltage; however, they create an increasingly complicated switching map that results in harmonics. Four modes of operation were detected in creation of negative and positive polarity voltages. Transition modes provide polarity inversion capability. Compared to H- Bridge inverters, the efficiency of this power inverter can be increased by 7%. Simulation results demonstrate the successful operation of the inverter.

## WORKING EXPERIENCE:

- **SRF Limited:** From 16.09.2009 To 15.09.2010.(1 YEAR)
