# Academic Project

**Project#1: Altlife (Restore Health. Reclaim Life).**

• Team Members: 4.

• Language of Implementation: REACT-NATIVE, GRAPHQL, APPIUM.

• Operating System: WINDOWS & LINUX.

**Roles and Responsibilities:**

• Worked as a Developer and responsible for Developing Application scenarios based on business and functional requirements.

• Involved in preparation, execution of Developed Application. Executed Automation test cases for the Developed Application.

• Identifying and reporting the bugs and tracking up to closure.

• Altlife aims to it's time for all of us to start taking control of our health and put an end to the looming threat of living a life dependent on medication.

• About a billion people in the world suffer from lifestyle diseases. Our current medical solutions focus on managing the symptoms but not the actual root causes.

• We got together as a power squad for all of you who are like us with one common aim – to solve the problem of lifestyle diseases and enable each of us to restore health and reclaim life.

• Here we are today, with that solution in place, welcoming you to join the Altlife tribe!

**Project#2: Leave Management Application on AngularJS Programs.**

• The main objective of the proposed system is to decrease the paper work and easier record maintenance by having a particular website for leaves maintenance.

• In the current system, students & employees have to suffer lots of problems and formalities for the approval of leave.

• In today's system students & employees specially hostellers have to maintain a leave register and slip for the record of leave, all the activities in this system are done manually and which results students & employees to face cumbersome.

• Team Members: 2.

• Language of Implementation: ANGULARJS.

• Operating System: WINDOWS.
